## Panelmox® Joint Filler

Panelmox® joint filler is manufactured from extreme heat-treated and fibre reinforced natural gypsum. This product should be used for jointing the square edged Panelmox® wall lining boards. The boards should be fixed in accordance with the installation instructions, dry and free from dust. Only begin jointing once a constant ambient temperature has been reached.

To prepare: slowly mix the Panelmox® filler into clean, cold water at a ratio of 2:1 i.e. 5kg filler to 2.2-2.3 ltr of water, in a clean container; stir until the mixture forms stiff peaks. Use a spatula or smoothing trowel to fill the joints (5-7mm gap) between the boards, remove excess filler. Once dry a second coat can be applied. When fully cured the joint can be sanded for a seamless finish.

Storage- Can be stored for 9 months from date of manufacture in a dry environment.

Supplied in 5kg bags

Panelmox® is a registered trademark of Panel Agency Ltd.  
Panelmox® board and joint filler is manufactured by Lindner GFT GmbH.
